Rosehip Oil

Rosa Canina Plant Oil

Grades: Chilean Rosehip Refined, Chilean Rosehip Organic, Rosehip Refined and Rosehip Organic Cold Pressed

Pack Size: 5kg, 25kg and 200kg

Background & Origin

Rosehip Oil has been used in folk medicine for a long time, first documented in use by the ancient Egyptians and Mayans to protect and nourish skin.

The oil was popular as part of health and beauty routines long before science uncovered the reasons behind its effectiveness. Rosehip Oil has long been used to reduce the appearance of scars and stretch marks.

The plant's latin name, Rosa Canina, is believed to originate from the Roman idea that it could cure the bite of rabid dogs. Seed and fruit remains from the plant can be traced back to prehistoric settlements.

Often confused with Rose Oil that is extracted from the flower of the rose plant, authentic Rosehip Oil comes from pressing of the deep red rose plant seeds, which are primarily grown in Chile.

Benefits

Authentic Rosehip Oil is one of the most sought-after ingredients in the personal care market. The oil is versatile, protective and has a delicate, earthy aroma, making Rosehip a powerful and highly attractive ingredient offering personal care brands the value boost that truly engages with today's consumers.

Rosehip Oil's unique blend of nutrients, particularly its linoleic and alpha linolenic fatty acid content, marks it out as great natural moisturiser, leaving skin feeling healthy, hydrated and refreshed. The oil is also thought to have significant anti-ageing properties, lifting and brightening the skin.

Demonstrating its versatility and flexibility, Rosehip Oil's natural vitamins A and C content suggest it could have anti-inflammatory and skin healing properties too and its abundant nutrients help to boost the production of collagen for skin elasticity and firmness.

Extract method

Rosehip Oil is cold-pressed. While the process is more complex, it helps to retain as many natural nutrients and benefits in the oil as possible, enabling brands to harness these qualities in personal care formulations.
